

Data Retention and Deletion Policy

Version 1.0 | Last Updated: May 30, 2026 | Owner: Pedro Martins, Founder

1. Introduction and Purpose

Clarity is an early-stage personal AI financial co-pilot mobile application operated by Pedro Martins as a solo founder. Clarity helps users understand spending, budgets, goals, and financial context through the Clarity app and Rex, the AI assistant inside the product.

This Data Retention and Deletion Policy explains how Clarity retains, deletes, and disposes of user data, including personal information, Plaid-connected financial data, product records, assistant data, support records, and operational data. Clarity's retention approach is based on data minimization, purpose limitation, user control, security, legal obligations, and practical operational needs. Clarity does not sell personal financial data.

2. Scope

This policy applies to all user data collected, received, generated, stored, or processed through the Clarity app, public website, support channels, account connection flows, and related backend systems. It covers data stored in Supabase, Clarity's primary managed authentication, database, and storage provider, and data processed by service providers used to operate Clarity.

This policy applies to account and profile data, Plaid-connected financial account data, imported financial data, budgets, goals, categories, Rex conversations and memory, voice-derived text if voice features are used, support and deletion request records, logs, backups, and other product or operational records.

3. Data We Collect and Retention Periods

Clarity retains data only as long as reasonably needed to provide the product, support users, maintain security and reliability, comply with legal or platform obligations, resolve disputes, debug issues, and preserve necessary operational records. Retention periods may vary based on product configuration, provider behavior, legal requirements, and user requests.

Data Category	Examples	Typical Retention
Account and profile data	Email address, account identifiers, authentication records, preferences	While account is active; deleted or de-identified after verified deletion, subject to exceptions.
Plaid-connected financial data	Institution metadata, account labels, balances where supported, transactions, categories, connection metadata	While needed for account, budget, transaction, dashboard, and Rex features; deleted or de-identified after verified deletion unless an exception applies.
Budgets, goals, categories, planning data	Budgets, goals, spending categories, plans, progress records	While account is active or until removed by the user or deleted through a verified request.
Rex assistant data	Conversations, prompts, generated responses, approved memory/context, voice transcripts if used	While needed for assistant history, personalization, memory, reliability, and support; removable where controls allow or through verified deletion.
Support, privacy, deletion records	Contact messages, support history, privacy/deletion correspondence	As needed to document and respond to requests, generally up to three years unless longer retention is required.
Security, audit, diagnostic logs	Error logs, security logs, abuse-prevention records, technical metadata	For security, debugging, reliability, abuse prevention, and legal needs, generally up to twelve months.
Backups and recovery records	Database and system backups maintained by Clarity or providers	Deleted data may remain in backups for a limited period, generally up to ninety days, until backup rotation removes it.
Legal, fraud, incident records	Records needed for disputes, fraud prevention, security incidents, legal compliance	Only as long as reasonably necessary for the applicable purpose.

Disconnecting a financial account is different from deleting stored Clarity data. Disconnecting may stop future access through Plaid or another account connection provider, but historical data already stored in Clarity may remain unless removed through product controls or a verified deletion request.

4. Data Deletion Rights and Process

Users may request deletion of their Clarity account or product data through in-app controls where available, the public Contact page at <https://goclarity.app/contact>, the Data Deletion page at <https://goclarity.app/data-deletion>, or by emailing clarity.rex@gmail.com with the subject "Data deletion request."

To protect users, Clarity may take reasonable steps to verify the requester's identity and confirm the scope of the request before deleting data. Users should contact Clarity from the email address associated with their account when possible. Users should not send bank passwords, full account numbers, card numbers, Social Security numbers, one-time login codes, API keys, screenshots, CSV files, or sensitive financial documents through public forms or email.

After a deletion request is verified, Clarity will delete or de-identify eligible account, financial, assistant, and product records from active systems as reasonably practicable, generally within thirty days unless the request is complex, additional verification is needed, or an exception applies. Clarity may also revoke or remove related account connection records where supported by the provider and current implementation.

5. Exceptions to Deletion

Clarity may retain limited information when necessary to comply with law, complete security or fraud-prevention work, investigate incidents, resolve disputes, enforce terms, maintain audit or support records, satisfy tax/accounting or platform obligations, debug reliability issues, protect users or the service, or complete backup rotation.

Service providers, including Supabase, Plaid, AI providers, support/contact tools, hosting providers, and analytics or monitoring providers if enabled, may retain information according to their own terms, legal obligations, retention schedules, backup practices, and security requirements. When Clarity retains information under an exception, it aims to keep only what is reasonably necessary for the applicable purpose.

6. Data Disposal Methods

Clarity uses practical disposal methods appropriate for an early-stage solo-founder product and managed cloud infrastructure. These may include deleting rows or objects from Supabase, deleting or de-identifying user-owned records, revoking or removing account connection tokens where supported, removing assistant memory or conversation records where supported, restricting access to retained records, rotating backups according to provider schedules, deleting support records when no longer needed, and requesting provider-side deletion where appropriate and available.

Clarity does not promise instant deletion from backups, logs, or all third-party systems. Backup and log deletion may occur through scheduled retention and rotation. Where hard deletion is not immediately feasible, Clarity may de-identify, restrict, or segregate data until deletion is completed.

7. Policy Enforcement and Review

Pedro Martins, Founder of Clarity, is responsible for implementing and maintaining this policy. Because Clarity is currently a solo-founder product, deletion requests, retention decisions, and provider coordination are handled directly by the founder or by approved service-provider workflows.

This policy will be reviewed at least annually and whenever material changes occur, including major changes to Plaid integration, Supabase architecture, AI processing, data categories, deletion tooling, legal requirements, or service providers. As Clarity grows, retention tracking, access controls, vendor review, and deletion workflows will be formalized further.

8. Compliance with Applicable Laws

Clarity's retention and deletion practices are designed to support privacy principles reflected in applicable laws and frameworks, including the California Consumer Privacy Act (CCPA), GDPR principles, and general U.S. privacy and consumer protection expectations. These principles include data minimization, purpose limitation, storage limitation, transparency, reasonable security, and user rights to access, correct, delete, or restrict certain processing where applicable.

Rights and obligations may vary depending on the user's location, the type of data, Clarity's legal status, and applicable exceptions. This policy is intended to describe Clarity's operational approach and should be read together with Clarity's Privacy Policy, Terms of Service, Security and Data Handling page, and Data Deletion page.

9. Contact Information

For deletion requests, privacy questions, or retention questions, contact Clarity through one of the following paths:

- Email: clarity.rex@gmail.com
- Contact page: <https://goclarity.app/contact>
- Data Deletion page: <https://goclarity.app/data-deletion>
- In-app controls: account, privacy, or deletion settings where available

Please include enough non-sensitive information for Clarity to identify the account and understand the request. Do not include bank credentials, full account numbers, Social Security numbers, one-time codes, API keys, or sensitive financial documents in public forms or email.
